Four distinct layers designed to cover all stages of wound care.

- » Layer 1, a non-adherent contact layer, protects the wound site and will not stick to granulating tissue
- » Layer 2, a soft pad, absorbs drainage
- » Layer 3, a non-woven backing with an adhesive border, securely holds the contact pad in place
- » Layer 4, a semi-occlusive, polyurethane film, helps deter external contaminants and maintain an optimal wound environment
- » Rectangular shape is designed for post-op applications

VFCTACUSENSE

Diabetes Foot Testing by Visual Footcare Technology

Four tools for a comprehensive diabetic foot examination.

- » Use for a visually engaging clinical experience to identify and stratify the triad of risk factors: Neuropathy, Peripheral Vascular Disease (PVD) and Deformity that interact to ultimately result in ulceration.
- » The 5.07/10 gm monofilament is used to identify loss of protective sensation—a key sign of sensory neuropathy.
- » The digital monitor quickly measures skin moisture levels with a non-destructive measuring approach, governed by Bioelectric Impedance Analysis (BIA) technology.
- » The paper is a dynamic, calibrated footprint imaging device used to identify and measure areas of high focal plantar pressure and identify structural and biomechanical anomalies—key signs of motor neuropathy. High-pressure areas appear as dark spots to create a visual interpretation that “dark is dangerous.”
- » VibraTip™ easily replaces the 128Hz tuning fork or biothesiometer as an accepted approach to the testing for diabetic peripheral neuropathy (DPN). This single, small device can effectively offer the same diagnostic capabilities currently attributed to the work of these two devices. The vibration stimulus emitted from the VibraTip reaches deeper into the skin surface than the point pressure created by a monofilament.

FOOT & ANKLE

INTELLIGENT SOLUTIONS.

Foot & Ankle Implant Systems

Like you, our goal is to enhance the lives of patients. This central focus has led to the development of innovative foot and ankle implant systems and biologic solutions designed for surgical efficiency and better patient outcomes.

Medline Unite® Foot Plating System—An all-in-one plating system with advanced performance and design features for the most frequently performed procedures.

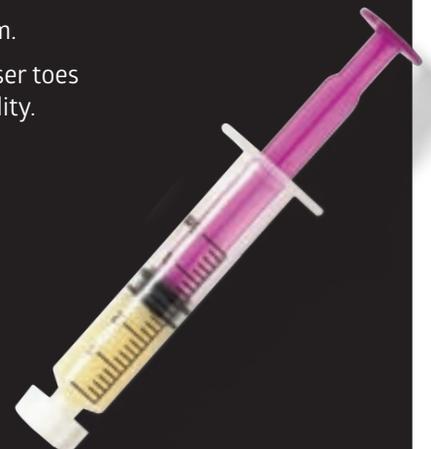

Medline Unite® Cannulated Screw System—A comprehensive portfolio of low-profile headed and zero-profile headless compression screws precision-crafted from titanium.

ARROW-LOK® Digital Fusion System—An effective solution for arthrodesis of the lesser toes with implants that offer optimal stability, intentional simplicity and maximum versatility.

100% Allograft Biologics—A wide selection of demineralized bone allograft options that can be used for fusions, fractures and osteotomies.
